

Thank you for ordering the Individual Study Version of our Church Sound Boot Camp! You are about to study the same program that literally thousands of your fellow church sound techs have used to raise the level of technical excellence in their own churches.

This new version of the program combines the audio recording of the live workshop with the slides used during the class, saved as MP4 files. Just follow along in the workbook, answering the questions as they are presented.

The entire program adds up to roughly six hours of class time, so we have segmented the topics into individual files to make it easier to study and refer back to specific areas of interest.

Here is a list of those topics for each MP4 file:

- CSBC_p1.....Great Microphone Technique, part 1
- CSBC_p2.....Great Microphone Technique, part 2
- CSBC_p3.....How to Hook Up Your Sound System
- CSBC_p4.....Maximizing Your Console
- CSBC_p5.....Relationships & Burnout
- CSBC_p6.....Equalization
- CSBC_p7.....Signal Processing
- CSBC_p8.....Putting Together a Great Mix
- CSBC_p9.....Loudspeakers

Please don't hesitate to contact us directly if you have any questions about the materials presented. Of course you can also get questions answered on the CSC Discussion Group.

So now sit back and enjoy the workshop!

Be Blessed!
